**Subsector A11: SAFETY AND SECURITY**

---

**Subsector :** A11 **Registration Date :** 2013-11-21  
**Organization :** SIS **Draft Issue Date :** 2013-11-21  
**Country :** Sweden **Latest Date for Comments :** 2014-02-21  
**Project ID :** 00022304/0001 **Project Established**  
**ICS :**  
**National Ref :** 22304  
**Title :** Societal security - Business continuity management  
**Scope :**

This standard of management of continuity specifies requirements to plan, establish, implement, implement , monitor , maintain and continually improve a documented management system to protect against, reducing the likelihood and prepare for , react and recover from disruptions when they occur .

The requirements of this standard are generic and are intended to be applicable to any organization or parts thereof, regardless of type, size and orientation. The extent to which these requirements are applicable depends on the complexity of the organization and the business environment.

The purpose of this standard is not to force a uniform structure of management continuity, but to help an organization to design a management system that is suitable for its needs and complying with its stakeholders. The needs based on the requirements of the regulations, organizational requirements and industry requirements for goods and services , the applied processes , the organization's size and structure and stakeholder expectations.

This standard is applicable to all organizations regardless of size and orientation that would

- a) establish, implement , maintain and improve a management system for business continuity ,

- b) ensure that an established continuity policy is followed ,

- c) demonstrate to others that the organization works standard.

- d) seek certification of its management system by an accredited certification body or

- e) conduct a self-assessment and self- declaration of conformance with this standard .

This standard can be used to assess an organization 's ability to meet its own needs and obligations in terms of continuity management .

**Title :** Quality criteria for training firms

**Scope :** A training firm is a firm belonging to a system, to train skilled employees. It collaborates with other training firms in a network and resigns from dealing with real money, i.e. the exchange of goods, services and money is virtual and without real risk. For almost every sector there are training forms, e.g. IT-services and catering services. Training firms and their employees buy and sell goods and/or services on a virtual level. Usually a training firm is divided into different departments, e.g. marketing, financing and sale. In Austria training firms are used to prepare or to train the access to employment, occupational come-back and change among other things. They are operated by schools and by organisations for adult vocational training.

**Title :** Methods of test for beer. Determination of final attenuation  
**Scope :** The final degree of fermentation is one of the fundamental parts of specifications, which characterize beer according to the terms of the Regulation No 1014/2008/ES PGI "Czech beer". The currently valid version of the Czech standard (ČSN) issued in 1995 no longer corresponds to internationally respected methodology of Analytica EBC (European Brewery Convention), section 9.7 "Final Attenuation of Beer". Therefore, it is necessary to amend the original standard. The basic principle of the method will be maintained, but different experimental procedure will be harmonized in ČSN to prevent acquisition of different results. Moreover, it is necessary to supplement this methodology with the determination of precision in terms of repeatability and reproducibility.

**ICS :** 71.080.60, 75.160.20  
**National Ref :** NTA 8115:2013 Concept en  
**Title :** Automotive fuels - Hydrous ethanol as a blending component for petrol - Requirements and test methods  
**Scope :** NTA 8115 specifies requirements and test methods for marketed and delivered hydrous ethanol to be used as an extender for automotive petrol fuel according to EN 228 at levels above 10 % (V/V). The document describes properties, limits and test methods to be applied in order to determine its quality. The NTA is intended as specification for trading amongst fuel suppliers and fuelling station owner, but also to present motor guarantees to car park owners or, in the long run, to consumers.

**National Ref :** 2292

**Title :** O-rings. Flat back-up rings

**Scope :** This national standard and product based on the same is commonly used globally. This standard covers anti-extrusion rings for metric O-rings housing applications. The standard is from 1967 and therefore it needs to be reviewed. SS 2292 and SS 2293 cover two design types. The proposal is to cover 5 types in one standard. The 5 types correspond to the types in ISO 3601-4. The revised standard will give detailed design to fit metric O-ring housings according to the revised edition of SS 1588. The conceptual design is based on ISO 3601-4 with the difference that this revised standard will give detailed dimensions per housing.

**Project ID :** 00048312/0001 Draft for public enquiry  
**ICS :**  
**National Ref :** SRPS B.H8.147:2013  
**Title :** Standard Test Method for Density, Relative Density, or API Gravity of Crude Petroleum and Liquid Petroleum Products by Hydrometer Method  
**Scope :** This test method covers the laboratory determination using a glass hydrometer in conjunction with a series of calculations, of the density, relative density, or API gravity of crude petroleum, petroleum products, or mixtures of petroleum and nonpetroleum products normally handled as liquids, and having a Reid vapor pressure of 101.325 kPa (14.696 psi) or less. Density is an important quality indicator for automotive, aviation and marine fuels, where it affects storage, handling and combustion. However, this property of petroleum is an uncertain indication of its quality unless correlated with other properties.

**Relatedness :**

**Scope :** undyed motor and aviation gasoline, jet propulsion fuels, naphthas and kerosine, and, in addition, petroleum waxes and pharmaceutical white oils. This test method reports results specific to this test method and recorded as, "Saybolt Color units."

**Relatedness :**

**Title :** Standard Specification for Denatured Fuel Ethanol for Blending with Gasolines for Use as Automotive Spark-Ignition Engine Fuel

**Scope :** This specification covers nominally anhydrous denatured fuel ethanol intended for blending with unleaded or leaded gasolines for use as a spark-ignition automotive engine fuel. Denatured fuel ethanol shall conform to the specified performance requirements for the following: ethanol content, methanol, solvent-washed gum, water content, denaturant content, inorganic chloride content, copper content, acidity, pHe, sulfur content, sulfate content, appearance, and specific gravity. The only denaturants used for fuel ethanol shall be natural gasoline, gasoline components, or unleaded gasoline at the minimum concentration prescribed. Prohibited denaturants include methanol which does not meet the specified requirement, pyrroles, turpentine, ketones, and tars (high-molecular weight pyrolysis products of fossil or nonfossil vegetable matter). Sampling, containers, and sample handling techniques, and the test methods for determining conformance to the specified requirements are given.

**Title :** Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method)

**Scope :** This standard specifies test method for determination of the heat of combustion of hydrocarbon fuels. It is designed specifically for use with aviation turbine fuels when the permissible difference between duplicate determinations is of the order of 0.2 %. It can be used for a wide range of volatile and nonvolatile materials where slightly greater differences in precision can be tolerated. In order to attain this precision, strict adherence to all details of the procedure is essential since the error contributed by each individual measurement that affects the precision shall be kept below 0.04 %, insofar as possible. Under normal conditions, the test method is directly applicable to such fuels as gasolines, kerosines, Nos. 1 and 2 fuel oil, Nos. 1-D and 2-D diesel fuel and Nos. 0-GT, 1-GT, and 2-GT gas turbine fuels.

**Title :** Standard Test Method for Vapor Pressure of Petroleum Products (Mini Method)

**Scope :** This standard specifies test method for use of automated vapor pressure instruments to determine the total vapor pressure exerted in vacuum by air-containing, volatile, liquid petroleum products, including automotive spark-ignition fuels with or without oxygenates. This test method is suitable for testing samples with boiling points above 0°C (32°F) that exert a vapor pressure between 7 and 130 kPa at 37.8°C (100°F) at a vapor-to-liquid ratio of 4:1. Measurements are made on liquid sample sizes in the range from 1 to 10 mL. No account is made for dissolved water in the sample.

**Title :** Standard Test Method for Determination of Benzene, Toluene, Ethylbenzene, p/m-Xylene, o-Xylene, C9 and Heavier Aromatics, and Total Aromatics in Finished Gasoline by Gas Chromatography

**Scope :** This test method covers the determination of benzene, toluene, ethylbenzene, the xylenes, C9 and heavier aromatics, and total aromatics in finished motor gasoline by gas chromatography. The aromatic hydrocarbons are separated without interferences from other hydrocarbons in finished gasoline. Nonaromatic hydrocarbons having a boiling point greater than n-dodecane may cause interferences with the determination of the C9 and heavier aromatics. For the C8 aromatics, p-xylene and m-xylene co-elute while ethylbenzene and o-xylene are separated. The C9 and heavier aromatics are determined as a single group. This test method covers the following concentration ranges, in liquid volume %, for the preceding aromatics: benzene, 0.1 to 5 %; toluene, 1 to 15 %; individual C8 aromatics, 0.5 to 10 %; total C9 and heavier aromatics, 5 to 30 %, and total aromatics, 10 to 80 %. Results are reported to the nearest 0.01 % by either mass or by liquid volume. Many of the common alcohols and ethers that are added to gasoline to reduce carbon monoxide emissions and increase octane, do not interfere with the analysis. Ethers such as methyl tert-butylether (MTBE), ethyl tert-butylether (ETBE), tertamylmethylether (TAME), and diisopropylether (DIPE) have been found to elute from the precolumn with the nonaromatic hydrocarbons to vent. Other oxygenates, including methanol and ethanol elute before benzene and the aromatic hydrocarbons. 1-Methylcyclopentene has also been found to elute from the precolumn to vent and does not interfere with benzene.

**Title :** Standard Test Method for Determination of MTBE, ETBE, TAME, DIPE, tertiary-Amyl Alcohol and C1 to C4 Alcohols in Gasoline by Gas Chromatograph

**Scope :** This test method covers the determination of ethers and alcohols in gasolines by gas chromatography. Specific compounds determined are methyl tert-butylether (MTBE), ethyl tert-butylether (ETBE), tert-amylmethylether (TAME), diisopropylether (DIPE), methanol, ethanol, isopropanol, n-propanol, isobutanol, tert-butanol, sec -butanol, n-butanol, and tert-pentanol (tert-amylalcohol). Individual ethers are determined from 0.20 to 20.0 mass %. Individual alcohols are determined from 0.20 to 12.0 mass %. Equations used to convert to mass % oxygen and to volume % of individual compounds are provided. At concentrations <0.20 mass %, it is possible that hydrocarbons may interfere with several ethers and alcohols. The reporting limit of 0.20 mass % was tested for gasolines containing a maximum of 10 volume % olefins. It may be possible that for gasolines containing >10 volume %

**Subsector S24: SOIL QUALITY**

**Subsector :** S24 **Registration Date :** 2013-11-07  
**Organization :** NEN  
**Country :** Netherlands  
**Project ID :** 50001852/0001 **Project Established**  
**ICS :** 13.080.10  
**National Ref :** NEN 5754:2013 Concept nl  
**Title :** Soil, soil lots and sediment - Calculation of organic matter content on a mass basis as loss-on-ignition  
**Scope :** This standard describes a method for the determination of the content of organic matter in soil and watersoils according to method of loss-on-ignition. Loss-on-ignition gives after correction of moisture a valuation of the content of organic matter. This standard is applicable for all kinds of soil and soil lots being building materials treated according to

**Scope :** NEN-EN 16179 and sediments pretreated according to NEN 5719.
