**Scope :** The present Austrian Standard specifies the technical implementation of a unified, structured 3plus-dimensional data model for building construction and related spatial civil engineering constructions based on Building Information Modeling (BIM). The data model represents the basis for the cooperation (technical implementation of data exchange and of a common data model as well as of data storage of information) of all those taking part in the the life time cycle management, starting from the idea, planning and execution, economic control up to demolition and disposal. This ÖNORM provides the bases for a comprehensive, unified, product-neutral, systematized exchange of graphical and meta data. The possibility of reverse compatibility with ÖNORM A 6241-1 is integrated part of the present standard.

 Scope : This standard describes the procedure and equipment for the determination of the airborne particles at the workplace through the sampling on an appropriate collection substrate and their gravimetric quantification. The standard is applicable to all of the airborne particles whose analysis requires gravimetric determination and it allows the determination of the health related fractions defined in UNE-EN 481 when the appropriate aerosol samplers were used. The procedure of measurement described can be used to carry out measurements to determine the occupational exposure concentration, measurements for comparison with limit values (occupational) to evaluate the exposition via inhalation and periodic measurements. It may also be used to carry out screening measurements of time weighted average concentration (see UNE-EN 481, 4.2) and screening measurements of variation of concentration in time and/or space (see UNE-EN 481, 4.3).
