Subsector A01: TOURIST SERVICES

Subsector : A01 **Registration Date :** 2014-07-31
Organization : AENOR
Country : Spain
Project ID : P0043437/0001 **Project Established**
ICS :
National Ref : PNE 178501
Title : Management system of smart tourist destinations. Requirements
Scope : This standard establishes a management system to provide the tourist destination with a useful tool to determine the intelligence of a destination.

The adoption of a management system of a Smart Tourist Destination, is a strategic decision affecting the destination and the responsible body of the destination. The implementation of the management system is influenced by varying needs, objectives, products, services provided, processes and organizational structure.

The standard will provide with a methodology to manage integrally a smart tourist destinations with a focus on continuous improvement and enhancement of resources and geographical space.

This standard would apply to the managing body of the destination, usually the City, without detriment to other organizations with delegated responsibilities, or who can assume the responsibilities in this area (eg.. Council, Government, Ministry, council, etc.)

The model has its basis on the draft Intelligent Tourism Destination, developed on behalf by the Ministry of Tourism, as established in the National Tourism Plan (PNIT) 2012-2015 approved by the Government of Spain in June 2012, where the following definition of Smart Tourist Destination is approved:

"An innovative tourist destination consolidated on cutting edge technology that ensures the sustainable development of the territory, facilitates innovative tourist visitor interaction and integration with the environment, and increases the quality of the visitor's experience at the destination."

Title : Indicators of smart tourist destinations.
Scope : This standard establishes a set of specific guidelines, in the form of criteria and indicators to assess the various aspects of a tourist destination and to identify those that are critical in order to consider a destination as an intelligent one.

The catalogue of indicators will be developed initially identifying the destination management body (or management bodies) of the destination in order to determine the relevance of the indicators based on the following criteria:

Relevance: Possibility of using an indicator in relevant decisions related to destination management, improvement of resident satisfaction and tourist visitor experience. In this

Scope : regard the following actions be undertaken:

- Determine the degree of importance of each indicator in relation to their relevance to facilitate decision making.
- Identification of stakeholders who will use the information provided by a given indicator.
- Specification of the frequency, speed and degree of detail of information for each indicator.

Feasibility: Feasibility to access the extent required in each of the indicators.

- Determine if there are valid sources that respond to the need for information and detecting agents that can provide access to them.
- Evaluate the possibility of generating a measurement system on arrival, in case of not having access to a relevant indicator

Reliability: Detect valid and reliable sources of information that support the indicator:

- Reliability: Consistency or stability of the measure
- Validity: what is being measured is what has to be measured

ICS :

National Ref : NS 8141-3
Title : Vibration and shock - Guideline limit values for construction work, open-pit and pit mining and traffic - Part 3: Effects of vibration from blasting on triggering landslide in quick clay
Scope : This part of the standard establishes a guideline limit value for avoiding landslide of quick clay due to vibrations caused by blasting. The limit value applies for blasting of rock or other solid masses that border on quick clay, where the slope, topography etc. is so that a landslide may develop. The standard describes how the vibration is measured and evaluated. The limit value is given as a peak value of frequency-weighted velocity as defined in clause 3, and is specified with the aim to avoid landslide of the quick clay. This part of the standard only covers the risk for development of landslide. Damage on construction works caused by vibration inducing activities is covered by Part 1 and 2. This standard does not apply to vibrations arising naturally such as earthquakes, wave action, etc. The standard does not apply to blasting in quick clay with the aim of earth moving. Such work implies that the stability conditions in the area are properly mapped and that the planned blasting only provokes stirring and displacement of clay mass in the intended area, see e.g. [15], [18], [20] and [21]. The limit value in this part of NS 8141 does not apply to human responses to vibrations or damages that may arise on infrastructure for example to water and gas pipelines, and electric cables, but such installations shall be mapped, see NS 8141-:2013 and NS 8141-2:2013.

Title : Assessment of in-situ compressive strength in structures and precast concrete components – Complementary guidance to that given in TS EN 13791
Scope : This Standard complements TS EN 13791, which gives methods for determining the characteristic in-situ compressive strength in concrete structures and precast concrete

Scope : components based on:

- a) core testing;
- b) rebound hammer, ultrasonic pulse velocity and pull-out force measurements after a relationship with core strength has been determined for the particular concrete under investigation

This Standard also provides additional guidance on:

- planning an investigation, selection of test methods, selection of the test locations, assessment of individual core results within a group; assessment where the strength of concrete based on test, specimens is in doubt.

In addition, this British Standard provides guidance on the following cases not covered by TS EN 13791

- assessment of an unknown structure using a margin based on the t-statistic, use of indirect methods without correlation to core strength, relative testing, i.e. comparison of a volume of concrete under investigation with concrete in similar elements that has been accepted, action when the producer has declared nonconformity.

National Ref : ÖNORM B 5012/A
Title : Structural design of buried water and sewerage pipelines
Scope : The purpose of this ÖNORM is to provide guidance for the structural analysis of buried pipelines. The calculation is based on generally accepted technical and field-proven principles. This ÖNORM contains a calculation method for buried pipelines and determines the stresses of piping systems made of all materials to be used for the transport of water / wastewater in pressure or gravity pipelines. The standard describes the design and structural analysis of buried pipes for all applications in water supply and sanitation on the basis of the calculation of stress, strain and deflection. There are established guidelines for the critical design criteria (stress, deformation and / or deflection calculation). The method is applied for all nominal diameters of pipes. However, for very large diameters the design in the installation of pipes may require the inclusion of other additional parameters, such as the homogeneity of the surrounding soil.

 Title : Paint and varnishes. High performance corrosion resistance decorative solvent-borne coatings
 Scope : This standard defines the requirements to be met by a high performance corrosion protection decorative solvent-borne coating which is applied over metal substrates in the decorative market, and which is applied on buildings, their trim and fittings and related structures with purposes decorative, functional and protective.

The standard UNE 48316 only takes into account the corrosion protection of decorative coatings.

This standard does not apply to other protection coatings such as:

- against microorganisms (algae, fungi, bacteria)
- against chemical agents (acids, alkalis, organic solvents, gases)
- against mechanical effects (abrasion)
- against fire

This standard does not apply to other kind of coatings such as:

- powder coating material
- curing oven coatings
- coatings with dry film thickness over 2 mm

Title : Prestressing steel - Requirements, classification and proof of conformity
Scope : This ÖNORM specifies the requirements and the tension steel grades that are used for the prestressing of concrete, but also for other applications in the construction industry. Subject of this ÖNORM are the following types of prestressing steel: Wires, seven-wire strands, rods. This ÖNORM describes the initial assessment of factory production control and external control, with the specified requirements for prestressing steel after this ÖNORM are demonstrated.

ICS : 91.120.20**National Ref :** prPN-B-02151-5**Title :** Building acoustics -- Noise protection in buildings -- Part 5: Residential buildings with improved acoustical performance -- Requirements and classification scheme

Scope : This Standard sets the requirements for protection against noise in residential buildings with improved acoustical performance. The minimum requirements obligatory for all buildings are defined in following polish standards: PN-B-02151-2 (currently under revision), PN-B-02151-3 (currently in the last phase of revision). This standard defines classes for residential buildings/apartments and sets requirements concerning: allowable maximum noise level from installation equipment in the building (extension of the requirements set in the PN-B-02151-2 standard), sound insulation properties of internal and external walls (extension of the requirements set in the PN-B-02151-3 standard) and sound reverberation in rooms (extension of the requirements set in the PN-B-02151-4 standard). Additionally this standard describes procedures for classifying buildings based on control, in-situ measurements.

Title : Water quality - Sampling - Part 5: Guidance on sampling of drinking water from treatment works and piped distribution systems (ISO 5667-5:2006)

Scope : ISO 5667 is a group of standards dealing with the general aspects of sampling (Parts 1 to 3) and with the sampling of specific types of water (from Part 4 onwards). ISO 5667-5 covers the sampling of drinking water within a piped distribution system and should be read in conjunction with ISO 5667-1 and ISO 5667-3. Effective monitoring of drinking water requires collaboration between sampling programme designers, water treatment plant and distribution system operators, sample collectors, laboratory analysts and data users. ISO 5667-5 gives guidance on the selection of sampling locations and the collection of samples when monitoring drinking water from treatment plants and from piped distribution systems. Understanding of the purposes for monitoring drinking water and of the principles behind the methods of analysis is important, since specific sampling protocols can vary widely in accordance with different purposes and different analytical methods.

Scope : This ÖNORM specifies requirements for the quality of bathing water in whirl and hygiene-related equipment, and the hygiene-relevant operation. Whirlpool tubs in accordance with this ÖNORM are provided for the intended use by one person. The information contained in this ÖNORM applies to whirlpools, which are operated in hospitals and convalescent homes, nursing facilities, bathing facilities accommodation establishments, community facilities and public and private buildings. For whirlpool tubs that are filled in the context of medical applications, for instance with thermal water, higher requirements than described in standard should be applied in special individual cases. Safety requirements for whirlpool baths (with the exception of use by kids and toddlers and handicapped people) are defined in OVE / EN 60335-2-60 ÖNORM.

Title : Water quality - Vocabulary - Part 2 (ISO 6107-2:2006 + Amendment 1:2012)

Scope : The ÖNORM ISO 6107 consists of a series of nine parts, under the general title Water quality ; Vocabulary. And defines terms used in certain fields of water quality characterization. In addition to the terms and definitions in the three official ISO languages (English, French and Russian), this part of ISO 6107 gives the equivalent terms and their definitions in the German language. The definitions are not necessarily identical to those in standard scientific text books or dictionaries. These definitions have been formulated for technical purposes, as well as for the understanding and benefit of the non-expert in the field.

Title : Water quality – Radionuclides – Determination of gross alpha activity by coprecipitation method

Scope : The national standard STN 75 7617 specifies the method for determination of the gross alpha activity in water samples by coprecipitation method. The specified method is applicable to drinking water samples of a high concentration of dissolved solids. The advantages of the coprecipitation method are high sensitivity and shorter time of measurement.

Title : Smart Cities. Asset management of the city. Specifications.
Scope : This National Standard specifies requirements for establishing, implementing, maintaining and improving a system of management of municipal assets for the purpose of enabling a local authority to have a systematic approach to achieve continuous improvement in their management, including all elements up the inventory of assets and rights.
This National Standard defines a set of coordinated and systematic activities, so that a local authority in accordance with its strategic plan, can handle optimal and sustainable way: their assets, performance, risks and costs associated with over life cycle of the different assets.
This Standard applies to the management of physical assets and asset systems of the local authority. Understanding how active those defined in Annex exemplary.
This National Standard is designed to be used independently or can be aligned or integrated with management systems covered by other Standards.
This Standard applies to all local authorities who wish to ensure they meet their asset management policy declared and want to show this fulfilment to third parties. This conformity can be confirmed by a self-assessment and self-declaration of conformity or certification by asset management system by an external organization.
